THE 17CEP4 IS A DIRECT-VIEW PICTURE TUBE FOR USE IN TELEVISION RECEIVERS AND INCLUDES SUCH FEATURES AS:

- A short straight electron gun not requiring an ion trap.
- 6.3V. - 450 MA heater.
- Short neck
- A gray tinted face affording approximately 79% light transmission
- Rectangular Glass Type
- Spherical light weight face.
- Electrostatic Focus
- Metal Backed Screen

NOTES:

1. Grid No.5, Grid No.3, and the collector are connected together within the tube, are referred to herein as anode.

2. Cathode should be returned to one side or to the mid-tap of the heater transformer winding.

3. For focus with anode current of 100 ua and 14 3/4" x 11 11/16" raster.

4. Visual extinction of focused raster.
Extinction of stationary focused spot will require that these values be about 5 volts more negative.

DIAGRAM NOTES:

1. Reference line is determined by the plane C-C1 of the reference line gauge (JETEC No. 116) when the gauge is resting on the glass cone. The neck diameter near the cone may exceed 1.500" but is limited by the internal contour of the yoke reference line gauge.
2. The plane through the tube axis and pin position No. 6 may vary from the plane through the tube axis and anode terminal by an angular tolerance (measured about the tube axis) of 30° . Anode terminal is on same side as pin position No. 6.

WARNING:

X-Ray Warning. If this tube is operated in excess of 16,000 Volts, X-Ray shielding may be necessary to protect against possible danger of personal injury from prolonged exposure at close range. Such protection may be provided by the protective face viewing window of apparatus using tubes of this type. Protection is sufficient if the radiation measured in contact with the window is less than 6.25 MR/hr.

Additional data will be furnished by our engineering department upon request.
